Insider Tips To Make Your Business Run Faster, Easier And More Profitably

RECOMMENDED READ

10D Tech hosted Business Tech Day in November, featuring entrepreneur and author Mike Michalowicz

Recently, Steve and Dave attended an IT Conference in Nashville, TN, where Mike was a keynote speaker discussing his book and strategies

"All In: How Great Leaders Build Unstoppable Teams."

Building successful teams is more challenging than ever with remote work, flexible schedules, and diverse generations. "All In" offers insights on recruiting the right talent, empowering struggling employees, aligning skills with company needs, and fostering a culture where every team member is deeply engaged. Unlock the secrets to nurturing a high-performing workforce that takes ownership of their work, values your organization, and contributes to its growth. Transform your team into a cohesive unit where everyone thrives, with benefits extending to your success.

OUR MISSION:

To build a community of success-minded entrepreneurs that inspires excellence, encourages collaboration and expands the capacity of all members to achieve great things.

3 CYBER SECURITY MYTHS THAT WILL HURT YOUR BUSINESS THIS YEAR

Working amid the ever-changing currents of technology and cyber security, businesses often find themselves entangled in a web of misinformation and outdated ideas. But failing to distinguish between myth and fact can put your business's security at serious risk.

Based on expert research in the field, including CompTIA's 2024 global State Of Cybersecurity report, we will debunk three common misconceptions that threaten to derail your success in 2024.

Myth 1: My Cyber Security Is Good Enough!

Fact: Modern cyber security is about continuous improvement.

Respondents to CompTIA's survey indicated that one of the most significant challenges to cyber security initiatives

today is the belief that "current security is good enough" (39%).

One of the reasons businesses may be misled by the state of their security is the inherent complexity of cyber security. In particular, it's incredibly challenging to track and measure security effectiveness and stay current on trends. Thus, an incomplete understanding of security leads executives to think all is well.

Over 40% of executives express complete satisfaction with their organization's cyber security, according to CompTIA's report. In contrast, only 25% of IT staff and 21% of business staff are satisfied. This could also be accounted for by executives often aving more tech freedom for added convenience while frontline staff deal with less visible cyber security details.

continued on page 2...

...continued from cover

“Either way, the gap in satisfaction points to a need for improved communication on the topic,” CompTIA writes.

Get your IT and business teams together and figure out what risks you face right now and what needs to change. Because cyber security is constantly changing, your security should never be stagnant. “Good enough” is never good enough for your business; vigilance and a continuous improvement mindset are the only ways to approach cyber security.

Myth 2: Cyber Security = Keeping Threats Out

Fact: Cyber security protects against threats both inside and outside your organization.

One of the most publicized breaches of the last decade was when BBC reported that a Heathrow Airport employee lost a USB stick with sensitive data on it. Although the stick was recovered with no harm done, it still cost Heathrow £120,000 (US\$150,000) in fines.

Yes, cyber security is about protection. However, protection extends to both external and internal threats such as employee error.

Because security threats are diverse and wide-ranging, there are risks that have little to do

with your IT team. For example, how do your employees use social media? “In an era of social engineering, there must be precise guidelines around the content being shared since it could eventually lead to a breach,” CompTIA states. Attacks are increasingly focused on human social engineering, like phishing, and criminals bank on your staff making mistakes.

Additionally, managing relationships with third-party vendors and partners often involves some form of data sharing. “The chain of operations is only as strong as its weakest link,” CompTIA points out. “When that chain involves outside parties, finding the weakest link requires detailed planning.”

Everyone in your organization is responsible for being vigilant and aware of security best practices and safety as it relates to their jobs. Make sure your cyber security strategy puts equal emphasis on internal threats as much as external ones.

Myth 3: IT Handles My Cyber Security

Fact: Cyber security is not solely the responsibility of the IT department.

While IT professionals are crucial in implementing security measures comprehensive cyber security involves a multidisciplinary approach. It encompasses not only technical aspects but also policy, development, employee training, risk management and a deep

understanding of the organization’s unique security landscape.

Because each department within your organization involves unique risks, people from various roles must be included in security conversations. But many companies are not doing this. CompTIA’s report shows that while 40% of respondents say that technical staff is leading those conversations, only 36% indicate that the CEO is participating, and just 25% say that business staff is involved.

“More companies should consider including a wide range of business professionals, from executives to mid-level management to staff positions, in risk management discussions,” CompTIA writes. “These individuals are becoming more involved in technology decisions for their departments, and without a proper view into the associated risks, their decisions may have harmful consequences.”

Business leaders and employees at all levels must actively engage in cyber security efforts, as they are all potential gatekeepers against evolving threats.

Don’t Listen To Myths

By embracing a mindset of continuous improvement, recognizing the wide range of threats and understanding the collective responsibility of cyber security, your business will remain safe, resilient and thriving, no matter what the future holds.

“I DIDN’T KNOW”

Unfortunately, That Excuse Doesn’t Replenish Your Bank Account, Resolve A Data Breach Or Erase Any Fines And Lawsuits.

It’s coming...

- That day a hacker steals critical data, rendering your office useless...
- That day when your bank account or credit card is compromised...
- Or that day when your customers’ private lives are uprooted...

Cybercriminals and hackers are constantly inventing NEW ways to infiltrate your company, steal your assets and disrupt your life. The ONLY way to STOP THEM is this:

You Must Constantly Educate Yourself On How To Protect What’s Yours!

CARTOON OF THE MONTH

RETIRED NAVY SEAL SHARES THE KEY TO BUILDING AND LEADING A HIGH-PERFORMANCE TEAM

Most business leaders strive for one thing: to be a strong and competent leader of a high-performing team. To do this, they'll try just about anything, from free lunches to daylong team-building retreats. Although these are helpful, high-performing teams don't begin with external motivators. They begin when leaders embrace a culture of extreme ownership.

"Extreme ownership is pretty straightforward," Jocko Willink says. "You're not going to make any excuses. You're not going to blame anybody else. When something goes wrong, you're going to take ownership of those problems and get them solved."

Willink is the author of the New York Times bestseller *Extreme Ownership: How U.S. Navy SEALs Lead And Win*. He explains that the same leadership concepts that enable SEAL teams to succeed in the most intense circumstances can also help businesses win again and again.

As a young SEAL, Willink noticed that a culture of finger-pointing grew when blame was directed toward a person or a team. When that happens, "no one solves the problem," he says. However, when leaders owned issues and responsibility for finding a solution, the team reflected that ownership. "It actually made the other people inside the platoon have the same attitude. They'd say, 'It was my fault; let me fix it,'" Willink explains.

Eventually, Willink went on to fill leadership roles within the SEALs, learning to embrace personal accountability and team empowerment. Now a retired SEAL officer and co-founder of the leadership consulting firm Echelon, he's worked with hundreds of civilian companies on extreme ownership, finding the

same results: when leaders take ownership of problems, the entire team is more likely to be high-performing and successful.

How To Create An Extreme Ownership Culture

"The biggest thing you've got to overcome is your ego," Willink explains. Pointing out that someone didn't do their job right or that the marketing plan wasn't carried out correctly doesn't solve the problem. "You're the boss. You own it," Willink says. When one person takes ownership, it spreads. "That's what develops the culture."

Although extreme ownership starts with the boss, the key to a high-performing team is to empower individuals to take responsibility for projects and tasks too.

"If you want people to take ownership, you have to give them ownership," Willink says. This way, you empower your team to make decisions while you serve as a reliable guide and offer direction when needed. "Put them in positions where they make decisions, make mistakes and learn to be honest with you," he says. If you're not getting the behaviors you need, you can study it and start to correct it by figuring out what support you can provide.

Willink points out that there will always be team members who don't embrace ownership. But when extreme ownership is a culture, they'll naturally get weeded out.

Those who are ready to step up, however, will rise to the top. "There's something more important to many people than how much money they make," he says. "That is control over their destiny, autonomy and freedom."

HOW TO CONTACT 10D TECH FOR TECHNICAL SUPPORT

Help Button:

Press your 10D Tech HELP! Button, icon on your taskbar or shortcut on the desktop. Fill out the pop-up form with a description of your problem, and a Service Ticket will be created for you immediately. **This is the fastest way to open a new Service**

Ticket.

Send an email:

Support@10dtech.com

This quickly creates a Service Ticket automatically for us to get started on.

Telephone:

Corvallis/Eugene/Bend

(541) 243-4103

Portland/Salem

(971) 915-9103

If your request is urgent or you would like to talk to us, give us a call, and we will grab all the details and enter a Service Ticket for you.

KEYBOARD SHORTCUTS:

Windows logo+L = Lock Computer

Ctrl+C = Copy item to clipboard

3 Cyber Security Myths That Will Hurt Your Business This Year P. 1

What Every Small-Business Owner Must Know About Protecting And Preserving Their Company's Critical Data And Computer Systems P. 2

Retired Navy SEAL Shares The Key To Building And Leading A High-Performance Team P. 3

BUILD: AN UNORTHODOX GUIDE TO MAKING THINGS WORTH MAKING

By Tony Fadell

Build is an indispensable read for any business owner looking for motivation and practical advice. The book spans Tony Fadell's journey from early-career product designer to accomplished leader, and offers a treasure trove of insights for anyone trying to run a successful business.

Tony's real-world narrative, enriched by his experiences with icons like Steve Jobs, is compelling, easy to read and relatable. Each short chapter, ranging from five to 20 pages, tackles real-world challenges – from start-up funding to critical career-life choices and workplace dynamics. What sets this book apart is its blend of personal stories with the wisdom of Silicon Valley, all while advocating for a refreshingly "old-school" approach to leadership and management. *Build* is a must-read for those who want to find real solutions to modern business problems.

CHECK FRAUD CRIMES ARE "WASHING" AWAY BANK ACCOUNTS

Headlines are usually flush with the latest digital breaches out to get businesses. Weak passwords, complex social engineering and business e-mail compromise are often the culprits we hear about. But while our eyes and ears were honed in on digital threats, old-fashioned paper-and-pen crimes were sneaking into our bank accounts.

According to the Financial Crimes Enforcement Network, fraudulent-check crimes rose 201.2% between 2018 and 2022. Experts say that the rise of check fraud began in 2020 when criminals started stealing stimulus checks. Once those ended, they needed a new source of income. In 2023, S&P Global noted that check fraud made up one-third of all bank fraud, excluding mortgage fraud.

It's a cheap and relatively simple crime happening under our noses, and that's why they're getting away with it.

How Criminals "Wash" Checks

AARP says that most check fraud involves check "washing." This is when criminals use bleach or acetone to wash away the ink used to write the payee and check amount after stealing it from your mailbox or fishing it from a drop box. Once washed, the check dries, is filled out with new information and deposited at banks or cash-checking shops.

According to AARP, a 60-year-old man had a check for \$235 stolen and cashed for \$9,001.20 – all within 24 hours. It's not just the US either. An Ontario business owner sent a check for \$10,800 to the Canada Revenue Agency to make tax payments for his maple syrup company. Days later, it had been stolen and deposited into another account.

It's a low-budget, fast-cash reward for criminals. Even worse, some banks have deadlines for reporting this kind of crime and won't reimburse you if you alert them too late.

Prevent Check Fraud With These 6 Tips

Thankfully, there are a few simple steps you can take to significantly reduce your risk of check fraud.

- 1. Pay Online:** Pay bills online using a private Wi-Fi connection and a secure portal, like through your bank or vendor website.
- 2. Mail Safely:** Use the post office for mailing checks; avoid leaving them in personal or outdoor mailboxes.
- 3. Use Gel Ink:** Use non-erasable gel ink in blue or black for writing checks; these are harder to erase than ballpoint pen ink.
- 4. Collect Mail Daily:** Pick up your mail daily. If away, arrange for collection.
- 5. Monitor Your Accounts:** Regularly check your bank account online – a few times a week is best.
- 6. Report Incidents Immediately:** Report fraud quickly to your bank and Postal Inspection Service. Most institutions are required to reimburse stolen funds if the theft is reported within 30 days.

It might be a digital world, but criminals will use every tactic to get hold of your hard-earned cash. Add these simple tips to your routine to significantly reduce your risk of check fraud.
